

## Course Summary

HTML, CSS and Bootstrap go hand in hand for developing flexible, attractive and user-friendly websites.

HTML (Hyper Text Markup Language) is used to show content on the page whereas CSS is used for presenting the page. Bootstrap on the other hand is a modern library that builds on top of CSS to aid in building appealing user Interfaces. HTML describes the structure of a website semantically along with presentation cues, making it a mark-up language, rather than a programming language. HTML allows images and objects to be embedded and can be used to create interactive forms.

## Course Objectives

- Insert a graphic within a web page.
- Create a link within a web page.
- Create a table within a web page.
- Insert heading levels within a web page.
- Insert ordered and unordered lists within a web page.
